# Acid Catalysed Products

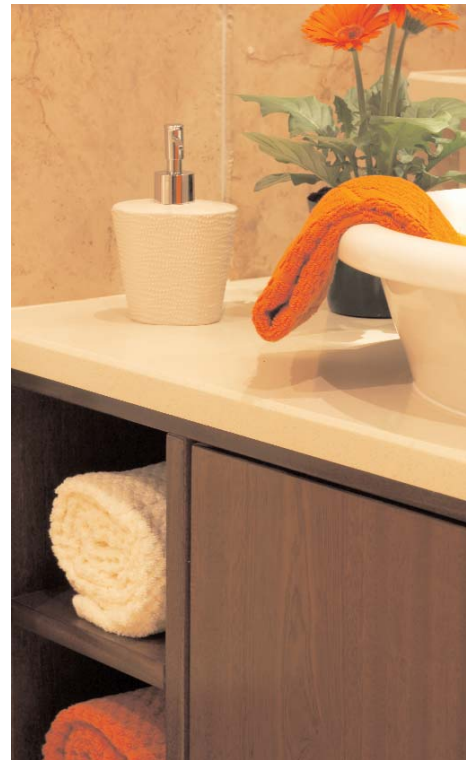

Clear and pigmented wood coatings for interior use

For interior use on: • Joinery • Furniture • Kitchens • Shopfitting • Offices • And more...

Advantages of acid catalysed • Tried and tested over many years • Fast drying • High resistance and durability

## Modern solvent-based solutions

Becker Acroma has a long history in developing quality wood coatings and our laboratories are constantly researching new product solutions.

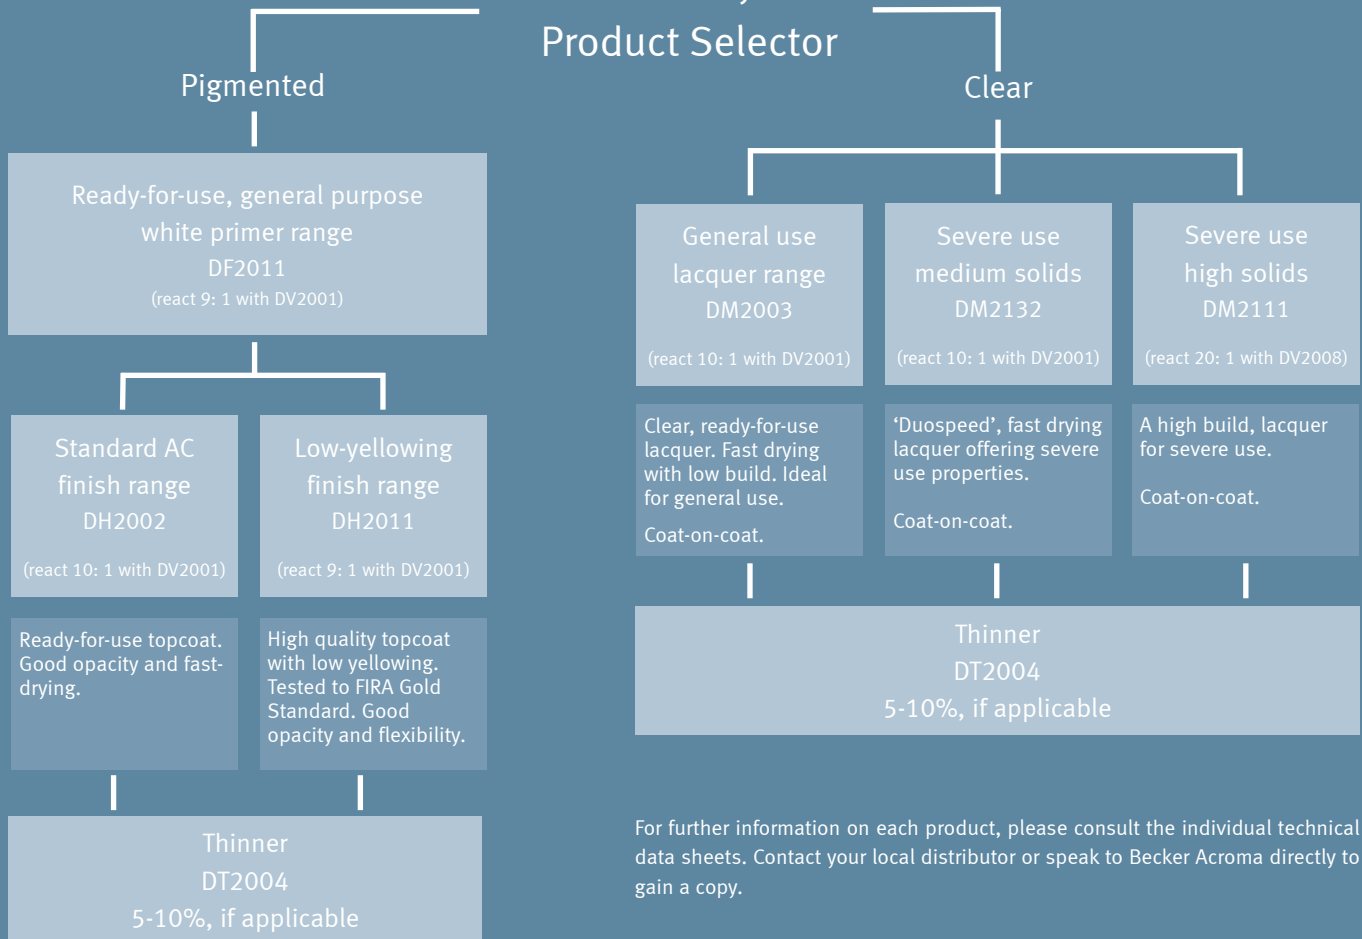

Our solvent-based coatings are available in a range of solid contents, allowing flexibility to achieve the solvent emissions directive legislation.

For advice on meeting VOC legislation or further guidance on products and application, talk to Becker Acroma or your local distributor. Our experience with all types of equipment and different

wood-based substrates is vast and we continually research environmental issues and legislation guidelines.

### Acid Catalysed Product Selector

For further information on each product, please consult the individual technical data sheets. Contact your local distributor or speak to Becker Acroma directly to gain a copy.

## Acid catalysed product details

Detailed information on all the acid catalysed products listed in our product selector is provided in the charts below.

### Pigmented primers and topcoats

		Viscosity B4 20°C (secs)*	Solids %	S.G.	Dilution max % volume	Description
Primer	DF2011	130-140	63	1.26	10	Fast drying primer, exhibiting good build, opacity and easy sanding.
	DH2002	75-85	49-50	1.10	10	A pigmented topcoat range which is fast drying with good 'feel' and levelling properties.
Topcoats	DH2011	130-140	65-66	1.20	10	A low yellowing pigmented topcoat which has good build and 'feel'. Passes FIRA gold award.

\* Viscosity figures are unreacted

### Clear lacquers

		Viscosity B4 20°C (secs)*	Solids %	S.G.	Dilution max % volume	Description
Lacquers	DM2003	42-44	34-36	0.94	10	A fast drying low build, ready-for-use lacquer range. Exhibits good 'feel' and passes BS6250 General Use.
	DM2132	30-32	43-45	0.92	10	A fast drying medium-build, ready-for-use lacquer range. Offers good slip and passes BS6250 Severe Use.
	DM2111	24-26	58-60	1.01	10	A range of high build lacquers giving good levelling, slip and passing BS6250 Severe Use.

\* Viscosity figures are unreacted

### Specialised acid catalysed product options

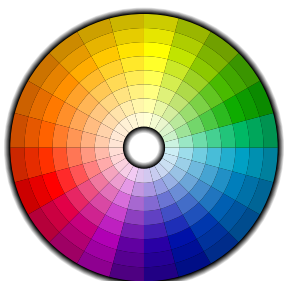

Becker Acroma has a number of products to suit specialist applications:

- Products for electro-static spray.
- Low-yellowing products.
- Basecoats to give an ultra-high build finish are available; ask about the DL ranges.
- A/C Thinners; fast-drying and retarding products.
- Specialist finishes; fire retardant (PyroLac<sup>®</sup>), antibacterial (Hygiene+).

### Global products, locally

- Easy to apply
- Fast drying
- Excellent durability
- Available next day
- 40,000+ stains & solid colours

### Paint colour options

Both the DF and DH product ranges can be fully customised to meet any colour and shade.

Talk to your local distributor for further information (see back). They offer a fast and accurate colour-matching service.

### Stain colour options

Water and solvent-based stains can both be used with our clear Acid Catalysed DM ranges. Choice depends on factors such as application equipment, environmental conditions and substrate.

Bespoke stain matches are available. Ask your distributor for options (see contact details at back).
